

Excerpt from "The Status of Temperate North
American Forest Genetic Resources. 1996.
D.L. Rogers and F.T. Ledig, eds. Report No.
16, University of California Genetic Resources
Conservation Program, Davis, CA. 102 p.

The Status of Temperate North American Forest Genetic Resources

An undertaking of the
Forest Genetic Resources Study Group
of the
North American Forestry Commission
of the
Food and Agriculture Organization of the United Nations

Deborah L. Rogers and F. Thomas Ledig
Editors

Sponsored by the
USDA Forest Service
and the
University of California Genetic Resources Conservation Program
with the technical collaboration of the
Forest Resources Division
Food and Agriculture Organization, United Nations

Report No. 16 ◆ July 1996

Genetic Resources Conservation Program
Division of Agriculture and Natural Resources
University of California
Davis, California U.S.A.

This report is one of a series published by the University of California Genetic Resources Conservation Program (technical editor: P.E. McGuire) as part of the public information function of the Program. The Program sponsors projects in the collection, inventory, maintenance, preservation, and utilization of genetic resources important for the State of California as well as research and education in conservation biology. These activities take place on the several campuses of the University of California with funds provided by the State of California to the University.

CITATION: Rogers, Deborah L. and F. Thomas Ledig, eds. 1996. The Status of Temperate North American Forest Genetic Resources. Report No. 16. University of California Genetic Resources Conservation Program, Davis, CA.

Deborah L. Rogers is a research geneticist with an appointment within the Office of the President, University of California, Oakland, California.

F. Thomas Ledig is senior scientist in the Pacific Southwest Research Station of the USDA Forest Service. He works at the Institute of Forest Genetics, Albany and Placerville, California on the genetics and evolution of conifers and teaches conservation genetics at the University of California, Davis.

PHOTOGRAPHY CREDITS: All photographs not otherwise credited are by **F. Thomas Ledig**.

The University, in accordance with applicable Federal and State law and University policy, does not discriminate on the basis of race, color, national origin, religion, sex, disability, age, medical condition (cancer-related), ancestry, marital status, citizenship, sexual orientation, or status as a Vietnam-era veteran or special disabled veteran. The University also prohibits sexual harassment. Inquiries regarding the University's nondiscrimination policies may be directed to the Affirmative Action Director, University of California, Agriculture and Natural Resources, 300 Lakeside Drive, 6th Floor, Oakland, CA 94612-3560. Tel. (510) 987-0096.

Contents

Preface.....	vii	Approaches to conservation	59
Acknowledgements.....	ix	<i>[F. Thomas Ledig, Deborah L. Rogers, and workshop participants]</i>	
Executive summary.....	xi	Information needs.....	67
Recommendations of the workshop	xv	<i>[Deborah L. Rogers and workshop participants]</i>	
North American temperate forests	1	Emerging issues.....	69
<i>[F. Thomas Ledig]</i>		<i>[Workshop participants]</i>	
Agricultural models and forestry practice	5	Literature cited.....	73
<i>[F. Thomas Ledig]</i>		Appendices	
Report methodology.....	11	A. List of respondents to questionnaire on the use of North American temperate forest tree species as exotic plantation species	77
<i>[Deborah L. Rogers]</i>		B. List of respondents to questionnaire on the domestic status of North American temperate forest tree species.....	79
Status of temperate forest tree genetic resources in North America	13	C. Workshop participants.....	81
<i>[Deborah L. Rogers]</i>		D. List of forest tree species mentioned in the text of the report	83
Status of temperate forest tree species of North America in countries where they are grown as exotic plantation species.....	29		
<i>[Deborah L. Rogers and F. Thomas Ledig]</i>			

List of tables

1	Countries and areas within them represented in the questionnaire on the use of North American temperate forest tree species as exotic plantation species	12
2	Temperate forest tree species in Canada that have been designated at risk	14
3	Gene conservation scores for 23 forest tree species in British Columbia.....	16
4	Native species and varieties of trees in México that are considered rare and endangered.....	18
5	Plantation area for dominant commercial temperate forest tree species of México	20
6	Pattern of land ownership and management for plantations of commercially significant temperate forest tree species in México	20
7	Genetic diversity represented in plantations and reserves of the major temperate forest tree species of commercial interest in México	21
8	Genetic reserves within tree improvement programs for Mexican temperate forest tree species	21
9	Exports of temperate forest genetic resources from México	22
10	Area managed by the major federal land management agencies in the United States and percentage with conservation restrictions as of September 30, 1993	23
11	Tree species on the federal 'Endangered Species' list for the United States.....	24
12	Examples of international transfer of forest tree germplasm from the U.S.A. to other continents.....	26
13	North American temperate forest tree species that are major plantation species outside of North America	32
14	Main North American species grown as exotics, by country	32
15	Recent or emerging trends in use of North American forest tree species where they are grown as exotics.....	34
16	Contribution of North American forest tree species to domestic supply of wood and wood products in countries where they are grown as exotics	35
17	Trade in North American forest tree germplasm reported for various countries where North American species are grown as exotics.....	36
18	Adequacy of gene pool reserves in countries where North American forest tree species are grown as exotics.....	37
19	Genetic diversity in plantations and reserves of North American forest tree species in those countries where they are grown as exotics.....	38
20	Gene pool reserves of North American forest tree species in countries where they are managed as exotics	39
21	Status of records on geographic origin of North American temperate forest tree germplasm used in exotic plantations.....	40
22	Land ownership patterns where North American forest tree species are grown as exotics.....	46
23	Invasiveness of North American temperate forest tree species in countries where they are managed as exotics	50
24	Major insect or disease problems of North American forest tree species in countries where they are managed as exotics	52
25	Transfer of germplasm from North American forest tree species between countries where they are managed as exotics	53

List of figures
