UNIVERSITY OF CALIFORNIA

This report is one of a series published by the University of California Genetic Resources Conservation Program (technical editor: P.E. McGuire) as part of the public information function of the Program. The Program sponsors projects in the collection, inventory, maintenance, preservation, and utilization of genetic resources important for the State of California as well as research and education in conservation biology. Further information about the Program may be obtained from:

Cover photograph: Assemblage of citrus fruits. *Photo credit:* Eric Sander, 10558 Putney Rd, Los Angeles, CA 90064, <http://www.ericssander.com>, used by permission.

Inside front cover: Top row, from left: Washington navel orange (CRC #1241) and Delta Valencia (Delta seedless) orange (CRC #3963); Second row, from left: Vainiglia pink-fleshed sweet orange (CRC #3801) and Moro blood orange (CRC #3830); Third row, from left: Mexican lime (CRC #1710), Variegated pink-fleshed Eureka lemon (CRC #2367), and *Citrus hystrix* (CRC #2454); Bottom row, from left: Frost Nucellar #1 (Owari) Satsuma mandarin orange (CRC #3178) and Gold Nugget mandarin orange (CRC #3913) *Photo credit:* All individual photographs by Ottillia J. Bier.

Inside back cover: Sliced fruits demonstrating diversity in the Citrus Variety Collection. *Photo credit:* William S. Myerchin

The University of California prohibits discrimination against or harassment of any person on the basis of race, color, national origin, religion, sex, physical or mental disability, medical condition (cancer-related or genetic characteristic), ancestry, marital status, age, sexual orientation, citizenship, or status as a covered veteran (special disabilities veteran, Vietnam-era veteran, or any other veteran who served on active duty during a war or in a campaign or expedition for which a campaign badge has been authorized). University Policy is intended to be consistent with the provision of applicable State and Federal laws. Inquiries regarding the University's nondiscrimination policies may be directed to the Affirmative Action/Staff Personnel Services Director, University of California, Agriculture and Natural Resources, 1111 Franklin St., 6th Floor, Oakland CA 94607-5200. Tel. (510) 987-0096.

TABLE OF CONTENTS

Preface	v	3. Citrus genetic resources in California	15
Citrus Genetic Resources Assessment		• Citrus Variety Collection (CVC)	15
Task Force membership	vii	• Citrus Evaluation Blocks (CEBs)	16
Charge to Task Force	ix	• Citrus Clonal Protection Program (CCPP)	17
Abbreviations and acronyms used in this report	x	• National Clonal Germplasm Repository for Citrus and Dates (NCGRCD)	18
Executive summary	xiii	• Interrelationships among CVC, CEBs, CCPP, and NCGRCD	19
1. Introduction	1	4. US citrus genetic resources outside California	23
2. Background	3	5. International citrus genetic resources	25
• History of citrus in California	3	6. Analysis and recommendations in support of citrus genetic resources in California	29
• Economic value of citrus to California	4	Literature cited	37
• Taxonomy of citrus	5	Appendix. Holdings of the University of California, Riverside Citrus Variety Collection (CVC)	43
• Biology of citrus	5		
• Origin and distribution of citrus	6		
• Domestication of citrus	6		
• Genetic diversity of citrus	6		
• Utilization of genetic resources in California	8		
• Importance of citrus genetic resources conservation	11		
• Acquisition of citrus genetic resources	12		
• Conservation of citrus genetic resources	14		

LIST OF TABLES AND FIGURES

Tables

Executive summary table 1. Costs of personnel, equipment, supplies, and facility requirements for the CVC.	xii
Table 1. Summary of taxa in subgenus <i>Citrus</i>	6
Table 2. Chronology of UCR Citrus Variety Collection supervision.	15
Table 3. Type and number of accessions in the CVC.	17
Table 4. Research projects utilizing accessions in the CVC (1997–2001).	32
Table 5. Costs of personnel, equipment, supplies, and facility requirements for the CVC.	35

Figures

Executive summary figure 1. Movement of citrus genetic resources into, within, and out of the California system for conservation and utilization of citrus genetic resources.	xv
Figure 1. December 23, 1914 headlines from the Riverside Daily Press.	4
Figure 2. Original Citrus Experiment Station staff on the steps of the main office-laboratory building ca. 1916.	4
Figure 3. A cultivation demonstration at Riverside ca. 1917.	5
Figure 4. Microscopic cross-section of developing seed revealing the multiple nucellar embryos contained within (polyembryony).	7
Figure 5. Germinating seeds revealing the multiple nucellar seedlings emerging from the seed at the left (polyembryony).	7
Figure 6. The strikingly distinct fruits of Buddha's hand citron (Fingered citron, <i>Citrus medica</i> , CRC #3768).	8

Figure 7. Fruit and branch of Australian finger lime (<i>Microcitrus australasica</i> CRC #1484).	8
Figure 8. Example of diversity at the molecular level. ...	9
Figure 9. Howard B. Frost (l.), first citrus breeder at UC Riverside (beginning in 1914) and Robert K. Soost, who succeeded Frost as citrus breeder in 1949 and was a curator of the CVC from 1982 until 1986. ...	9
Figure 10. Fruit and branch of Gold Nugget mandarin orange (CRC #3913).	10
Figure 11. Trunk of root-stock showing damage from <i>Phytophthora</i> infection.	10
Figure 12. Trunk with bark removed to reveal damage caused by the citrus tristeza virus (CTV).	11
Figure 13. Successful graft.	11
Figure 14. An incompatible graft shown with bark stripped away.	11
Figure 15. Hiryu (Flying Dragon trifoliate orange, <i>Poncirus trifoliata</i> , CRC #3795).	12
Figure 16. W.P. Bitters, curator of the Citrus Variety Collection from 1946 to 1982.	16
Figure 17. Budwood source trees for the Citrus Clonal Protection Program in a screenhouse-protected planting at the Lindcove Research and Extension Center.	18
Figure 18. Seedlings of indicator plants for indexing, growing in cool-temperature chamber of NCGRCD greenhouse facilities.	19
Figure 19. Movement of citrus genetic resources into, within, and out of the California system for conservation and utilization of citrus genetic resources.	20
Figure 20. Headstand of furrow irrigation system.	31
Figure 21. The squashed, softened stigma, one day after pollination, reveals germinating viable pollen grains.	34
